| 基础信息

1. 摘要

Reti-Pioneer 发表文本描述多任务筛查，但发布训练代码为疾病独立二分类循环，质量权重固定 1/0.5/0。本仓库实现单调有界质量路由、掩码多任务 BCE、endpoint-aware cross-cohort evaluation；可选 E5 质量条件骨干路由。校准/ECE/按病种 DCA 为评估框架（非新颖性主卖点）；NB@0.10 仅示意。当前数值为 SYNTHETIC 流水线自检，不得作为临床性能。

2. 术语表（首次展开）

| 缩写 | 全称 |

| CFF

3. 创新边界

| ID | 创新 | 状态 |

5. 研究过程（本机）

1. 以 2026-09-13 审稿修订后的 docs/paper/manuscript.md 为论文主线（未另发现独立用户上传稿）。

2. 安

6. 结果（SYNTHETIC；本仓库计算）

Arm · Eval · AUROC · AUROC_D · ECE · Cal ECE · NB@0.10 · n · Note

读表： auroc_D 便于跨臂对比；ECE 变化而 AUROC 不变符合温度缩放语义；n=10/48
时禁止方法优劣结论。旗标见 data/odir|brset|rfmid/SYNTHETIC_FEATURES.txt。

7. 讨论与局限

须区分 published multitask vs released independent loops; diabetes_related
不得进临床主表。待补充：真实 ODIR/BRSET 像素、GPU 三骨干特征、多 seed 临床表。RFMiD
影像本地有（N=3200）但仍带 SYNTHETIC 特征旗标。

8. 验收与审查

- 审稿修复验收：docs/chatgpt-runs/2026-09-13-review-fixes/ACCEPTANCE.md

- 真实
